Lab 3: Building a Web Application With TypeScript (Part 1)

Instructions

For this assignment, you begin implementing the "TodoIt" application described in the module reading assignment, Chapter 2: Building TodoIt – Your Own Web Application with TypeScript in the "Learn TypeScript 3 by Building Web Application" book.

Complete up through the step Adding TypeScript to the project which will give you practice setting up a project configuration for npm and TypeScript.

There is no Canvas submission for this project, you will submit your work to a GitHub repository as described below.

Submitting your work

Once your project is complete, commit your package-lock.json file to the provided classroom repository. Your instructor will clone and grade your repo after the due date for this assignment.

There is no Canvas submission for this project.
